

WHO IS M2M?

M2M Communications specializes in the design, manufacture, and operation of web-to-wireless **remote monitoring and control products and services.**

M2M products and services combine the wide spread availability and decreasing cost of wireless communications with the power of the Internet to provide feature-rich ease of use at a lower cost.

With years of industry experience and numerous successful applications, M2M can provide a Complete Solution.

We offer many excellent products available from stock. These are general-purpose models with numerous flexible and useful features. They are proven products and are well suited for a wide variety of applications.

However, we believe that it's our job to provide our customers with the best possible solution – not to simply sell what we have on hand. While the existing models may be a great beginning, they are not necessarily the best answer for every application.

By utilizing our numerous preconfigured products as "building blocks", we can create fast and reliable custom solutions to fit your exact needs.

M2M Web-to-Wireless Design, Manufacturing, and Support Services

M2M Communications is a Wireless M2M Systems Integrator and Application Provider. We specialize in industrial M2M applications, with specialization in equipment monitoring and control.

We work closely with our customers to understand their needs, then strive to provide an optimum solution based on the wireless communication options available.

Our expertise includes:

- CDMA digital cellular
- GSM digital cellular (GPRS)
- Orbcomm Satellite Network
- Local RF modems, 900 MHz or 2.4GHz

We provide a complete Wireless M2M system or any part of the system

Product Design and Manufacturing

We have extensive experience and numerous proven designs that can be used to quickly and reliably create a customized solution to provide the greatest benefit at the lowest cost. From prototypes to high volume ISO 9000 manufacturing, we can handle it.

Application Software and Web Site Development

- Web server front end development
- Web server back end development
- Interface to the communication gateways

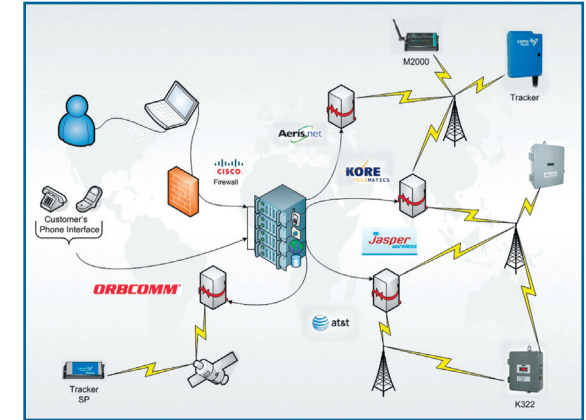

- Call processors
- Database development and administration
- Custom reports and data exporting

Web Site Hosting for secure, data driven M2M applications

- Always co-branded with your look and feel – often at no extra cost
- Secure gateways to numerous cellular and satellite networks

Value Added Reseller for cellular and satellite based data airtime M2M provides low cost airtime for most wireless technologies

Thousands of M2M Communications field units report to the M2M Network Operations Center every day. Many of these are installed outdoors, in all types of environments and conditions.

We provide the optimum solution to an application or problem based on the communication options available, build the devices and controls, and integrate them into the user's system.

We're a full service vendor

- Wireless communication and Internet expertise
- Field equipment using the best wireless solutions
- Airtime and network support
- Web site and application specific call processing

We are a 100% employee-owned company committed to:

- Maintaining a high standard of conduct emphasizing ethics and honesty
- Employing the best possible people
- Selling only high quality products
- Delivering more than expected, especially in the quality of our products and services

The engineers at M2M Communications are ready and able to help you develop a strategy and system implementation that will ensure your success.
